

## Keeping it clean.

Enclosures made by Logopak

**Enclosures protect machines against temperature changes, dust, moisture or unauthorised access. Logopak has extensive expertise in designing machine enclosures. Our engineers pay attention to every detail in order to ensure maximum user-friendliness.**

Even the basic models of our Logopak enclosures exceed by far the quality standards applied by our competitors. In addition, we offer you a wide range of upgrade options to cater for special requirements.

» **The choice is yours!**

Enclosures made by Logopak

# Sophisticated design in every detail!

## Robust design ○

Broken palletes on the conveyor are likely to result in collisions with the labeller. Due to their robust design, Logopak machines survive even heavy collisions undamaged. Production continues to run smoothly, which avoids a loss in production time and unnecessary repair costs.

## Stainless steel variants (optional) ○

For wet environments, e.g. frequently cleaned production halls or areas where fluid residue is common, we recommend our stainless steel variants to ensure your enclosure and all bolts and fasteners are effectively protected against corrosion. Particularly in hygiene-sensitive areas, stainless steel variants are a must.

## Maximum protection against moisture and dust ○

Logopak enclosures are equipped with a pneumatic flap door to protect both the machine and consumables from dust, dirt and fluids, which increases the service life of all components significantly.

## Available in different colours (optional)

All basic versions of our Logopak enclosures are made of steel and are powder-coated in RAL-9006 (aluminium white). Not your colour? We can powder-coat our enclosures in any RAL colour of your choice, e.g. to match your Corporate Identity or to adhere to any consistent colour scheme you prefer for your machinery. Powder-coated surfaces are particularly chemical-resistant and provide high mechanical durability.

### **Illumination**

Many labellers work in poorly lit environments. All Logopak enclosures, including our basic models, are equipped with integrated LED lights to provide the best possible visibility when inserting new label rolls or thermal-transfer films. This also allows quick at-a-glance checks even from a distance.

### **Highest safety standards**

At Logopak, our priority is the compliance with statutory regulations and safety standards. All our machines and enclosures fulfil the requirements of the currently valid Machinery Directive according to DIN EN ISO 13857.

To ensure maximum safety during operation, Logopak enclosures are equipped with a door contact switch as standard. This safety switch ensures that the automatic start-stop function works only when the doors are safely closed. However, test prints and setting adjustments are also possible when the doors are open.

### **Foldable doors (optional)**

Space in production facilities is usually limited. Quite often, labellers are installed in difficult-to-access areas that leave little room for the machine operator. Logopak enclosures can therefore be equipped with foldable doors as an option to provide best possible access even in very small spaces!

### **Cooling and heating systems (optional)**

Particularly low or high temperatures can have a negative effect on your consumables. Low temperatures may reduce the labels' effectiveness while particularly high temperatures may cause the labels to lose their stability or even lead to adhesive residues on the pulley or the print engine. To ensure optimum temperatures during the labelling process, Logopak enclosures can be equipped with a cooling or heating system.

## **Standard features Logopak enclosures:**

- » LED lights
- » Door contact safety switch
- » Pneumatic flap door
- » Surface powder-coated in RAL-9006

# Finding the perfect home for your machine.

State-of-the-art production processes, high-quality materials and Logopak's excellent customer service ensure that our enclosures meet even the highest demands in terms of quality and safety. From consulting to planning and production of your system, Logopak is your one-stop provider of high-end labelling solutions.

» **We will be happy to provide advice in planning your system and find the best solution for your individual requirements.**
